Hi Ritik,

Thanks for sharing the questions.

Inorder to optimise time, sharing the responses in advance.

Once you have gone through this, Nivedita can help set up a call between us to refine this further.

Let her know.

Q1. Career trajectory, experience, time at Quadria, and a typical day as a Partner

- I started my career around 2000 on the treasury side with PNB Gilts.
- After that I moved into the advisory side where I worked on project finance, capital markets and M&A advisory.
- Over time I began focusing more on healthcare transactions and eventually transitioned into healthcare investing.
- Today my work is largely centered around investing and helping build healthcare businesses across emerging Asian markets.
- At Quadria, my role as a Partner involves both strategic firm level responsibilities and investment related work.
- A typical day may include reviewing new opportunities, interacting with founders and management teams, guiding our team on diligence and investment memos, and working with portfolio companies on value creation.
- I also spend time engaging with investors and staying connected with the broader healthcare ecosystem.

Q2. Why focus exclusively on healthcare rather than diversifying?

- Quadria was built on deep healthcare expertise.
- The founding team came from different parts of the healthcare ecosystem and saw a large opportunity emerging in Asian healthcare markets.
- The idea was to combine sector knowledge with long term capital to support the growth of healthcare businesses.
- Healthcare offers a rare combination of large market size, long term demand visibility and meaningful social impact.
- In Asia the demand drivers are very strong such as rising incomes, ageing populations, increasing chronic diseases and expanding insurance coverage.
- Because healthcare is a complex sector, specialization allows us to understand the nuances of the industry much better and support companies more effectively.

Q3. How does being a healthcare growth investor influence strategy and targets?

- As growth investors we typically partner with companies that already have a credible operating model.
- These companies have demonstrated success in their segment and are ready to scale further.
- Our role is not just to provide capital but also to help strengthen governance, systems and leadership.
- We also help companies build partnerships and sometimes expand into new markets.
- Typically we look for businesses that have strong unit economics or a clear path toward them.
- We also look for differentiation in quality and service.
- The ability to scale beyond one location or city is important.
- Strong management teams with the ambition to build lasting institutions are also a key factor.

Q4. Does single sector focus give advantages or better returns?

- In private equity the real advantage often comes from pattern recognition and execution.
- When you focus on a single sector you develop deeper understanding of the industry.
- It helps build stronger relationships within the ecosystem.
- Deal sourcing becomes more effective because people recognize your specialization.
- Diligence becomes faster because you know what to look for.
- Supporting portfolio companies becomes easier since you have seen similar growth journeys before.
- Returns still depend on disciplined investing and good execution, but sector focus certainly improves decision making.

Q5. Structure or flow of making an investment in a PE firm

- The process usually begins with sourcing opportunities through our network of founders, doctors, operators and bankers.
- Once we identify a potential opportunity we conduct an initial evaluation to see whether the market and company fit our strategy.
- If the opportunity looks promising we move into detailed diligence.
- This includes commercial, financial, legal and regulatory diligence.
- In healthcare we also pay very close attention to clinical quality and governance.
- After diligence the opportunity is presented to the Investment Committee where risks, valuation and growth potential are debated.
- Once the investment is approved and completed we begin working closely with the company.
- This may involve strengthening processes, supporting expansion, building leadership teams and improving productivity.

Q6. Limited social media presence. How does that work?

- Private equity operates very differently from consumer facing businesses.
- Our primary stakeholders are institutional investors, founders and healthcare leaders.
- In this space credibility is built through track record and relationships rather than mass communication.
- Digital presence can help with brand awareness and attracting talent.
- However we prefer to communicate selectively and thoughtfully.
- In our business the depth of relationships matters more than the frequency of communication.

Q7. Primary channels to reach investors and portfolio companies

- Engagement with investors is largely relationship driven.
- We work closely with global institutional investors, sovereign investors and family offices.

- Many of these relationships develop over many years.
- On the company side opportunities often come through founder networks.
- Referrals from doctors and hospital leaders are also important.
- Investment banks sometimes introduce opportunities.
- Our existing portfolio ecosystem also leads to new partnerships.

Q8. Challenges related to macro trends, demographics and regulation

- Healthcare is closely influenced by policy and regulation.
- Pricing pressures and reimbursement changes can affect businesses.
- Licensing and compliance requirements can be complex.
- Talent shortages are a common challenge across markets.
- Insurance penetration is still uneven in many regions.
- Quality standards can vary significantly across markets.
- Our approach is to study these dynamics carefully before investing.
- We work with experienced operators and stay engaged with regulators and industry bodies.
- We focus on building companies that prioritize quality, efficiency and patient outcomes.

Q9. How do you measure success of marketing strategies?

- In private equity marketing success is not measured by visibility alone.
- It is reflected in the quality of relationships we build.
- Strong engagement with founders and management teams is an important indicator.
- Long term investor relationships also signal credibility.
- Access to high quality deal flow is another sign of a strong reputation.
- Talent attraction and recognition within the healthcare ecosystem also matter.

Q10. How did the firm adapt after Covid?

- After Covid investors became more focused on resilience of business models.
- Governance and risk management became even more important.
- There was greater focus on cash flow visibility and sustainable profitability.
- Companies also needed stronger operational efficiency.
- In response we strengthened our diligence processes.
- We worked closely with portfolio companies to improve operational systems.
- Many companies also invested more in digital capabilities and productivity improvements.

Q11. If not digital marketing, how do you reach investors?

- Most of our investor engagement happens through direct relationships.
- References from existing investors and partners play an important role.
- Industry conferences and forums also help build connections.
- Building trust in this industry takes time and consistency.
- The advantage is that once relationships are built they tend to be long term and stable.

Q12. How does Quadria build credibility and trust?

- Credibility comes from consistent behavior over time.
- Transparency with investors is very important.
- Maintaining disciplined investment processes builds confidence.
- Strong governance practices are essential.
- Honest communication during both good and challenging periods strengthens trust.
- In healthcare it is also important to show genuine commitment to clinical quality and patient outcomes.

Q13. How has healthcare investing evolved over the past twenty years?

- The healthcare sector has become far more institutionalized over the past two decades.
- Earlier many markets were fragmented and largely informal.
- Today we see more organized healthcare platforms.
- Patient expectations around quality and transparency have increased significantly.
- Insurance coverage has expanded in many markets.
- Digital technologies have transformed diagnostics, engagement and operations.
- Investors today also emphasize governance, compliance and scalability much more.

Q14. Evaluating a healthcare company's value proposition

- We look at whether the company is solving a meaningful problem for patients.
- Patient outcomes and safety are critical indicators.
- Clinical reputation and trust are important.
- Patient experience and service quality are also evaluated.
- Affordability and accessibility are key considerations.
- Repeat visits and referrals often reflect patient trust.
- Consistency of service across locations also matters.

Q15. Most critical elements of the 7Ps in healthcare

- People are extremely important including doctors, nurses and leadership teams.
- Processes around clinical protocols and safety standards are critical.
- Physical infrastructure and transparency help build patient confidence.
- Service quality and patient outcomes ultimately define the reputation of the institution.
- Pricing and accessibility are important but they cannot compensate for lack of trust or quality.

Q16. How does Quadria source opportunities?

- Healthcare investing is highly relationship driven.
- Many opportunities come through founder networks.
- Doctor and healthcare operator communities also play a role.
- Our portfolio ecosystem often generates new opportunities.
- Investment banks sometimes introduce transactions.
- Partnerships with other institutional investors also create opportunities.

Q17. How does Quadria position itself differently?

- Quadria has deep specialization in healthcare across Asian markets.
- We focus strongly on value creation and long term growth.

- Our work often goes beyond providing capital.
- We support companies in strengthening governance and operational capabilities.
- We work closely with management teams to help scale responsibly.
- The goal is to build long lasting healthcare institutions.

Q18. Major trends shaping the future of healthcare investment in Asia

- There is increasing focus on value based healthcare and better patient outcomes.
- Chronic disease management and preventive care are becoming more important.
- Insurance coverage is expanding in many markets.
- Healthcare delivery is becoming more organized and scalable.
- Digital technologies are improving patient engagement and operational efficiency.
- Quality standards and clinical governance are receiving greater attention.
- Cross regional collaboration across Asian healthcare markets is also increasing.

Q19. How is AI influencing healthcare and investment decisions?

- Artificial intelligence is beginning to influence both healthcare delivery and investing.
- In healthcare it is helping with clinical decision support and diagnostic analysis.
- Radiology and imaging interpretation are areas where AI is already being used.
- It also helps improve workflow efficiency and patient engagement.
- Healthcare organizations are using it to optimize revenue cycles and detect anomalies.
- From an investment perspective AI helps teams analyze large datasets faster.
- It helps identify patterns and operational insights, although human judgment remains essential.

Q20. Advice for students pursuing careers in finance or private equity

- Building strong fundamentals in corporate finance and valuation is essential.
- Understanding how businesses operate is equally important.
- Curiosity and willingness to learn about industries make a big difference.
- Private equity often involves dealing with ambiguity and solving complex problems.
- Clear communication and structured thinking are valuable skills.
- Integrity and long term thinking are critical in building a career.
- Developing domain expertise in a sector can also be a strong advantage.

Thanks and regards,
